PROFESSIONAL SUMMARY

AI Engineer on the founding team at Colligence Research, Bengaluru, working across both the product and the platform. Builds multi-agent and LLM pipelines over MCP, a code-generation service, and the Python and FastAPI backends behind them, and owns the platform they run on: CI/CD, infrastructure-as-code with OpenTofu and Ansible on Linode, Docker, Zitadel authentication, observability, alerting and incident response, all established from scratch. IEEE- and Springer-published, with three peer-reviewed papers and two more under review.

TECHNICAL SKILLS

AI and LLM Systems: Agentic Systems, MCP Orchestration, Multi-Agent Workflows, RAG, LangChain, LangGraph, Claude API, LLM Integration, Evaluation Harnesses

Infrastructure and DevOps: CI/CD, OpenTofu (Infrastructure as Code), Ansible, Docker, Linux, Linode, Observability and Alerting, Incident Runbooks, Zitadel (SSO/IAM), RBAC, Git

Languages and Backend: Python, FastAPI, REST APIs, PostgreSQL, SQL, Swift, Rust, Shell Scripting

Machine Learning and Vision: PyTorch, TensorFlow, YOLOv8, OpenCV, CNN, ResNet, Quantized Model Deployment

WORK EXPERIENCE

Colligence Research, Bengaluru, India – Founding Team (Nov 2025 to Present)

AI Engineer

- Works across the product and the platform: agentic and LLM engineering alongside end-to-end ownership of the infrastructure those systems run on.
- Established the DevOps/SRE function from scratch and now leads it: CI/CD, infrastructure-as-code with OpenTofu and Ansible on Linode, observability, alerting and incident runbooks.
- Replaced manual GitHub deploy workflows, cutting deployment errors for a four-person founding team.
- Operates the production stack end to end: Docker, Zitadel authentication (SSO and RBAC), monitored deployments with self-healing alerting.
- Owns system architecture across infrastructure and tooling.
- Building a retrieval-augmented system into the infrastructure layer so that infrastructure-as-code and SRE work (runbook lookup, change context, incident response) is grounded in the organisation's own configuration and history. In progress.

Associate AI Engineer (Dec 2025 to Feb 2026)

- Led a small team building the company's first multi-agent LLM pipeline for ERP automation over MCP, keeping long-running, multi-step workflows on track without human intervention.
- Built a code-generation service that parses structured input specifications and emits deployment-ready web applications.

Associate AI Engineer Intern (Nov 2025 to Dec 2025)

- Prototyped the first LLM integrations and agent workflows.

Technologies: Python, FastAPI, MCP, LangChain, LangGraph, Claude API, Multi-Agent Orchestration, OpenTofu, Ansible, Docker, Linode, CI/CD, Zitadel, RBAC, Linux, PostgreSQL

RVCE Centre of Excellence, Remote – Research Intern, AI and Deep Learning (Oct 2024 to Dec 2024)

- Built a deepfake-detection model from scratch for manipulated-face video, using no external detection APIs.
- Trained and evaluated the model on the FaceForensics++ and DFDC datasets.

Technologies: Python, PyTorch, TensorFlow, CNN, Computer Vision, FaceForensics++, DFDC

Ernst and Young India, Bengaluru, India – Associate Consultant Intern, Enterprise Cybersecurity (Aug 2024 to Sep 2024)

- Shadowed senior consultants on cloud-security and identity and access management work.
- Exposure to the TOGAF and IFTAS frameworks.

Exposure: Cloud Security, Identity and Access Management, TOGAF, IFTAS

EDUCATION

R V College of Engineering (VTU), Bengaluru, India (Dec 2021 to Aug 2025)

Bachelor of Engineering (B.E.), Computer Science and Engineering. First Class (66.6%), VTU scale. Official marks slip available on request.

PUBLICATIONS

- EduConnect: A Smart Solution for Streamlined School Administrations. Springer ICTIS 2025, Bangkok (ICT for Intelligent Systems, Vol. link.springer.com/book/10.1007/978-981-96-8750-3 9).
- An Empirical Study of ResNet50 Hyperparameter Tuning for Plant Disease Classification. IEEE Xplore, November 2024. ieeexplore.ieee.org/document/10816835
- Web-Server Controlled Rover with Robotic Arm and Object Detection. IEEE Xplore, November 2024. ieeexplore.ieee.org/document/10816816
- Two further papers under review.

PROJECTS

Arogya-Sathi – Offline-Capable Multilingual AI Healthcare Platform (Jan 2025 to Jun 2025)

- Symptom checking, X-ray fracture detection, prescription summarisation and a wellness chatbot, running fully offline on quantized models and demonstrated on a Raspberry Pi. Third place, college final-year showcase.
- Built a deterministic, rule-based drug-interaction and crisis-detection safety layer that the LLM cannot override.
- Built a 62-case labelled evaluation harness that scores those safety layers and wired it in as a CI merge gate at recall 1.00; building it surfaced a real missed self-harm disclosure. Crisis detection recall 1.00 and precision 0.93; emergency 1.00 and 1.00; drug screening 1.00 and 1.00.
- A LangGraph pipeline turns an uploaded medical report into a plain-language explanation in the patient's own language, with a self-verification loop; requests are routed across local Ollama models.

Technologies: Python, LangGraph, Ollama, Quantized Models, PyTorch, YOLOv8, OpenCV, Evaluation Harnesses, CI Gates, Raspberry Pi. github.com/Developer1010x/Arogya-Sathi

agentic-devops – AI-Powered CI/CD Pipeline Generator and Monitor

- Generates and monitors CI/CD pipelines for GitHub and GitLab repositories.

Technologies: Python, CI/CD, GitHub, GitLab, Agentic Systems. github.com/Developer1010x/agentic-devops

Knates Central – Student Resource Platform

- Student resource platform delivering centralised notes and academic material, adopted across 12 or more departments.

Technologies: Python, Web Platform.

Other Open-Source Work

- pybridge.ai: routes AI access across WhatsApp, Telegram and email so it can be driven from a phone.
- LLM Terminal: a lightweight terminal-based LLM assistant.
- Audio Deepfake Detection: flags AI-synthesised or cloned speech.

Technologies: Python, Swift, Rust, PyTorch, LLM Integration. github.com/Developer1010x
