

S Prajwall Narayana

AI Engineer

Liverpool, United Kingdom | Email: prajwallnarayana@gmail.com | Telephone: +91 7760604439 | GitHub: github.com/Developer1010x | Portfolio: sprajwallnarayana.vercel.app

PERSONAL STATEMENT

AI Engineer on the founding team at Colligence Research, working across both halves of the same system. I build the product - multi-agent and LLM pipelines over MCP, a code-generation service and the backend APIs behind them - and I own the platform it runs on, having established the DevOps and SRE function from scratch and led it since: CI/CD, infrastructure-as-code, Docker, observability, alerting, incident runbooks and authentication. Published three times in peer-reviewed venues (Springer and IEEE). I take ambiguous problems from prototype to a deployed, monitored system and stay responsible for it afterwards.

RIGHT TO WORK

Requires Skilled Worker sponsorship. Currently in Bengaluru, India; relocating to the UK.

TECHNICAL SKILLS

AI and LLM Systems: Agentic systems, MCP orchestration, multi-agent workflows, RAG, LangChain, LangGraph, Claude API, LLM integration, evaluation harnesses.

Infrastructure and DevOps: CI/CD, OpenTofu (infrastructure-as-code), Ansible, Docker, Linux, Linode, observability and alerting, incident runbooks, Zitadel (SSO/IAM), RBAC, Git.

Languages and Backend: Python, FastAPI, REST APIs, PostgreSQL, SQL, Swift, Rust, shell scripting.

Machine Learning and Vision: PyTorch, TensorFlow, YOLOv8, OpenCV, CNNs, ResNet, quantised model deployment.

WORK EXPERIENCE

Colligence Research, Bengaluru, India - November 2025 to Present (Founding Team)

AI Engineer, February 2026 to Present

- Work across both halves of the product: the AI and application engineering below, plus end-to-end ownership of the platform it runs on.
- Established the DevOps and SRE function from scratch and now lead it: CI/CD, infrastructure-as-code with OpenTofu and Ansible on Linode, observability, alerting and incident runbooks.
- Replaced manual GitHub deploy workflows with automated pipelines, cutting deployment errors for a four-person founding team.
- Operate the production stack end to end: Docker, Zitadel authentication and RBAC, and monitored deployments with self-healing alerting.
- Own system architecture across the infrastructure and tooling workstreams.
- Building a retrieval-augmented system into the infrastructure layer so that infrastructure-as-code and SRE work (runbook lookup, change context, incident response) is grounded in the organisation's own configuration and history. In progress.

Associate AI Engineer, December 2025 to February 2026

- Led a small team building the company's first multi-agent LLM pipeline for ERP automation over MCP, keeping long-running, multi-step workflows on track without human intervention.
- Designed and built a code-generation service that parses structured input specifications and emits deployment-ready web applications.

Associate AI Engineer Intern, November 2025 to December 2025

- Prototyped the founding team's first LLM integrations and agent workflows, the foundation the production multi-agent pipeline was later built on.

Technologies: Python, MCP, LangChain, LangGraph, Claude API, FastAPI, multi-agent orchestration, OpenTofu, Ansible, Docker, Linode, CI/CD, Zitadel, Linux.

RVCE Centre of Excellence, Remote - October 2024 to December 2024

Research Intern, AI and Deep Learning

- Built a deepfake-detection model from scratch for manipulated-face video, using no external detection APIs.
- Trained and evaluated the model on the FaceForensics++ and DFDC benchmark datasets.

Technologies: Python, PyTorch, TensorFlow, CNNs, computer vision.

Ernst & Young India, Bengaluru, India - August 2024 to September 2024

Associate Consultant Intern, Enterprise Cybersecurity

- Shadowed senior consultants on enterprise cloud-security and identity and access management engagements.
- Gained exposure to the TOGAF and IFTAS frameworks and to how cloud security reviews are run.

SELECTED ENGINEERING PROJECTS

Arogya-Sathi - offline-capable multilingual AI healthcare platform, January 2025 to June 2025

- Built a deterministic, rule-based drug-interaction and crisis-detection safety layer that the language model cannot override.
- Wrote a 62-case labelled evaluation harness scoring those safety layers and wired it in as a continuous-integration merge gate at recall 1.00; building it surfaced a real missed self-harm disclosure.
- Built a LangGraph pipeline that turns an uploaded medical report into a plain-language explanation in the patient's own language, with a self-verification loop, routing requests across multiple local Ollama models.
- Runs fully offline on quantised models - symptom checking, X-ray fracture detection, prescription summarisation and a wellness chatbot - demonstrated on a Raspberry Pi. Placed third at the college final-year showcase.
- Measured: crisis detection recall 1.00 / precision 0.93; emergency 1.00 / 1.00; drug screening 1.00 / 1.00.

Technologies: LangGraph, Ollama, quantised models, evaluation harness, CI merge gate, Raspberry Pi.

Repository: github.com/Developer1010x/Arogya-Sathi

agentic-devops - AI-powered CI/CD pipeline generator and monitor

- Generates and monitors CI/CD pipelines for GitHub and GitLab repositories.

Repository: github.com/Developer1010x/agentic-devops

pybridge.ai - AI access routed to a phone

- Routes AI access across WhatsApp, Telegram and email so the system can be driven from a phone.

Repository: github.com/Developer1010x/pybridge.ai

Knotes Central - student resource platform

- Co-built a platform delivering centralised notes and academic material, adopted across 12+ departments.

Repository: github.com/Developer1010x/KnotesCentral-Source-Code

Audio Deepfake Detection - synthetic speech detection

- Model that flags AI-synthesised or cloned speech.

Repository: github.com/Developer1010x/Deepfake-Audio-and-AI-Content-Detection

LLM Terminal - terminal-based LLM assistant

- Lightweight assistant for working with language models from the command line.

Repository: github.com/Developer1010x/LLM_Terminal

Two further papers are under review.

EDUCATION

R V College of Engineering (VTU), Bengaluru, India - December 2021 to August 2025

B.E. Computer Science and Engineering.

First Class (66.6%), VTU scale. Official marks slip available on request.
