SUMMARY

AI Engineer on the founding team at Colligence Research, working across both halves of the same system: multi-agent and LLM pipelines over MCP and the backend APIs behind them, plus end-to-end ownership of the DevOps/SRE platform they run on — CI/CD, infrastructure-as-code, Docker, observability, alerting and authentication. Published three times in peer-reviewed venues (Springer, IEEE).

EXPERIENCE

- AI Engineer — Colligence Research

Feb 2026 – Present

Founding team

Bengaluru, India

- Established the DevOps and SRE function from scratch and lead it: CI/CD, infrastructure-as-code with OpenTofu and Ansible on Linode, observability, alerting and incident runbooks.
 - Replaced manual GitHub deploy workflows with automated pipelines, cutting deployment errors for a four-person founding team; operate the production stack end to end (Docker, Zitadel auth and RBAC).
 - Own system architecture across the infrastructure and tooling workstreams; building a retrieval-augmented system into the infrastructure layer so SRE work is grounded in the organisation's own configuration and history.
- Associate AI Engineer — Colligence Research

Dec 2025 – Feb 2026

Founding team

Bengaluru, India

- Led a small team building the company's first multi-agent LLM pipeline for ERP automation over MCP, keeping long-running, multi-step workflows on track without human intervention.
 - Designed and built a code-generation service that parses structured specifications and emits deployment-ready web applications.
- Associate AI Engineer Intern — Colligence Research

Nov 2025 – Dec 2025

Founding team

Bengaluru, India

- Prototyped the founding team's first LLM integrations and agent workflows — the foundation the production multi-agent pipeline was later built on.
- Research Intern, AI & Deep Learning — RVCE Centre of Excellence

Oct 2024 – Dec 2024

Research internship

Remote

- Built a deepfake-detection model from scratch for manipulated-face video, using no external detection APIs; trained and evaluated on the FaceForensics++ and DFDC benchmark datasets.
- Associate Consultant Intern, Enterprise Cybersecurity — Ernst & Young

Aug 2024 – Sep 2024

Consulting internship

Bengaluru, India

- Shadowed senior consultants on enterprise cloud-security and IAM engagements; gained exposure to the TOGAF and IFTAS frameworks and how cloud security reviews are run.

SELECTED ENGINEERING PROJECTS

- Arogya-Sathi — offline-capable multilingual AI healthcare platform

Jan 2025 – Jun 2025

LangGraph, Ollama, quantised models, CI-gated eval harness

github.com/Developer1010x/Arogya-Sathi

- Deterministic, rule-based drug-interaction and crisis-detection safety layer the language model cannot override; a 62-case labelled evaluation harness scores it and runs as a CI merge gate.
 - Measured: crisis detection recall 1.00 / precision 0.93; emergency 1.00 / 1.00; drug screening 1.00 / 1.00. Building the harness surfaced a real missed self-harm disclosure.
 - LangGraph pipeline turns an uploaded medical report into a plain-language explanation with a self-verification loop; runs fully offline on quantised models (demonstrated on a Raspberry Pi). Placed third at the college final-year showcase.
- openplay — open-source screen-casting system in Rust

Rust, GStreamer, WebRTC, mDNS

github.com/Developer1010x/openplay

- Casts a screen to AirPlay, Miracast and a native WebRTC protocol across Linux/macOS/Windows; AirPlay HAP pairing, FairPlay, RTPS negotiation and Wi-Fi Direct implemented in Rust with mDNS discovery and GStreamer pipelines.
- agentic-devops — AI CI/CD pipeline generator and monitor

Python, LLMs, CI/CD

github.com/Developer1010x/agentic-devops

- Generates and monitors CI/CD pipelines for GitHub, GitLab and Gitea using LLMs.

TECHNICAL SKILLS

AI & LLM Systems: Agentic systems, MCP orchestration, multi-agent workflows, RAG, LangChain, LangGraph, Claude API, evaluation harnesses.
Infrastructure & DevOps: CI/CD, OpenTofu (IaC), Ansible, Docker, Linux, Linode, observability & alerting, incident runbooks, Zitadel (SSO/IAM), RBAC, Git.
Languages & Backend: Python, FastAPI, REST APIs, PostgreSQL, SQL, Rust, Swift, shell scripting.
Machine Learning & Vision: PyTorch, TensorFlow, YOLOv8, OpenCV, CNNs, ResNet, quantised model deployment.

EDUCATION

- B.E. Computer Science & Engineering — R V College of Engineering (VTU)

Dec 2021 – Aug 2025

Bengaluru, India

First Class

PUBLICATIONS
